INVENTOR:

ANDREW ALBRIGHT

BY *Fred C. Fraentzel,*
ATTORNEY

UNITED STATES PATENT OFFICE.

ANDREW ALBRIGHT, OF NEWARK, NEW JERSEY.

DESIGN FOR A SHAVING-BRUSH.

SPECIFICATION forming part of Design No. 33,992, dated January 29, 1901.

Application filed October 16, 1900. Serial No. 33,298. Term of patent 14 years.

To all whom it may concern:

Be it known that I, ANDREW ALBRIGHT, a citizen of the United States, residing at Newark, in the county of Essex and State of New Jersey, have invented and produced a new and original Design for Shaving-Brushes, of which the following is a specification, reference being had to the accompanying drawings, forming a part thereof.

This invention relates to brushes, but more particularly to a novel design for shaving-brushes, the following general description being given for the purpose of this specification and the drawings being mainly relied upon to elucidate its general features and to illustrate the new esthetical effect produced.

The design consists, essentially, in the general appearance and beauty of the shaving-brush herein described, having a main cylindrical body portion, an ornamental handle portion above said cylindrical body portion, a portion of said handle portion forming a part of the cylindrical body portion, the said cylindrical body portion terminating at its lower end in a marginal ring-shaped ornamental border or marginal band, all of said portions being of contrasting colors, and this ring-shaped ornamentation being curved and forming a top finish to the brush portion, which extends in a bunch from the main cylindrical body portion, substantially as illustrated in the accompanying drawings.

In the said drawings, which form a part of this specification and in which similar letters of reference are employed to denote similar parts in both views, Figure 1 represents a front elevation of a shaving-brush constructed in accordance with my novel design, and Fig. 2 is a top end view of the brush.

In the said drawings, A indicates the brush embodying the features of my novel design, which consists, essentially, of a cylindrical body portion *a*, the lower portion of which is bounded by a narrow ring-shaped ornament or border *b*, having a curved or bead-like mar-

ginal edge *b'*. This ring-shaped ornament or border *b* and the said cylindrical body portion *a* are of contrasting colors, so as to produce an attractive and positive contrast and a beautiful appearance and esthetical effect. The narrow ring-shaped ornament *b* also provides a beautiful top finish to the upper portion of the brush-bunch *c*. The main body portion *a* is a trifle wider across the top than at the bottom, terminating at the line *a'*, above which the said body portion is bounded by a narrow ring-shaped band *d* and which is formed with the ornamental handle portion *d'*. This handle portion *d'* is separated from the ring-shaped portion *d* by the sharp circular marginal edge *d²*, and when viewed from either direction, except the top and bottom, is bounded by the curved surfaces *d³*, *d⁴*, and *d⁵*.

It will thus be clearly seen that an attractive shaving-brush has been produced the handle of which is composed of the several ornamental parts hereinabove described, each of a contrasting color, and the drawings show a design for a shaving-brush which presents to the eye several alternately-arranged portions of certain ornamental configuration and of contrasting colors, the ornamentation being the same whether viewed from the front, back, or sides of the brush, but when viewed from the top presenting to the eye the representation of a sphere or ball shaped body.

Having thus described my design, I claim as new and desire to secure by Letters Patent—

The design for a shaving-brush substantially as shown and described.

In testimony that I claim the invention set forth above I have hereunto set my hand this 15th day of October, 1900.

ANDREW ALBRIGHT.
